RECYCLER VISIT QUESTION SHEET

Use one printed copy for each battery recycler visit

Recycler name		**Date**	
Plant address		**Visit time**	
Person met		**Designation**	
Phone / email		**Next follow-up**	

A. REGISTRATION AND AUTHORIZATION

1. What is your Central Pollution Control Board Battery Extended Producer Responsibility registration number, and may I verify the current certificate?

2. Which State Pollution Control Board has registered or verified this recycling facility?

3. What are the number and validity dates of your Consent to Operate or Consent for Operation?

4. What is your authorized annual recycling capacity in tonnes per annum?

5. Which battery categories are included in your authorization: automotive, portable, industrial, or electric-vehicle batteries?

6. Which battery chemistries are specifically authorized at this plant?

☐ Lead-acid ☐ Lithium Iron Phosphate ☐ Nickel Manganese Cobalt ☐ Lithium Cobalt Oxide ☐ Nickel Cobalt Aluminium ☐ Lithium Manganese Oxide ☐ Nickel-Cadmium ☐ Nickel-Metal Hydride ☐ Zinc-based

7. May I receive a copy of, or official link to, the current registration, consent and authorized-capacity documents?

B. MATERIALS ACCEPTED AND CURRENT PURCHASE PRICES

8. In what physical form do you buy batteries: complete packs, modules, loose cells, production scrap, black mass, or mixed loads?

Material	Accepted?	Current ₹/kg	Minimum quantity	Notes / condition
Two-wheeler lead-acid	■ Yes ■ No			
Car / commercial lead-acid	■ Yes ■ No			
UPS / inverter lead-acid	■ Yes ■ No			
LFP complete pack	■ Yes ■ No			
LFP modules / cells	■ Yes ■ No			
NMC complete pack	■ Yes ■ No			
NMC modules / cells	■ Yes ■ No			
LCO consumer cells	■ Yes ■ No			
NCA batteries	■ Yes ■ No			
LMO batteries	■ Yes ■ No			
Mixed lithium-ion	■ Yes ■ No			
Damaged / swollen lithium-ion	■ Yes ■ No			
Production scrap	■ Yes ■ No			
Black mass	■ Yes ■ No			

9. Are these prices for material delivered to your plant, or do they include pickup from my location?

10. For how many days will you honour a quoted purchase price?

C. PRICING, INSPECTION AND DEDUCTIONS

11. How do you calculate the purchase price: fixed ₹/kg, chemistry-based rate, model-based rate, commodity-index formula, or laboratory assay?

12. Which commodity index or formula do you use, and how frequently is the rate revised?

13. How do you identify and verify LFP, NMC, LCO, NCA and mixed lithium-ion batteries?

14. Do you use label/model verification, X-Ray Fluorescence, laboratory assay or another testing method?

15. What deductions apply for casing, plastic, steel, Battery Management System, moisture, contamination, damaged cells or incorrect chemistry?

16. What happens if the chemistry supplied differs from the declared chemistry?

17. What are your rejection criteria for burnt, leaking, swollen, opened or physically damaged batteries?

18. Do you provide a written weighment slip, inspection report and deduction calculation for every load?

19. Which weighing point is final for settlement: supplier location, pickup vehicle, plant gate or post-inspection weight?

D. LOGISTICS, STORAGE AND DOCUMENTATION

20. Do you offer pickup, and what is the minimum pickup quantity?

21. What pickup or freight charge applies per kilogram or per trip?

22. What packaging do you require for lead-acid batteries, intact lithium-ion batteries and damaged lithium-ion batteries?

23. What labels, photographs, packing lists, manifests, invoices or source documents must accompany each load?

24. Will you accept batteries collected from scrap dealers, service centres, battery shops, fleet operators and institutional generators?

25. What proof of legal ownership or authority to sell is required for warranty-return, accident-damaged or electric-vehicle batteries?

26. Can material be transported across state borders to your plant, and what prior intimation or documents do you require?

27. What maximum State of Charge is acceptable for lithium-ion batteries at delivery?

28. What safety requirements must my collection vehicle, containers and employees meet?

E. PAYMENT AND COMMERCIAL TERMS

29. How many working days after receipt, inspection or assay will payment be made?

30. Is payment based on gross received weight, accepted weight, assay result or recovered-material output?

31. What Goods and Services Tax treatment, invoice format and Tax Deducted at Source treatment apply?

32. Is any security deposit, onboarding fee, annual fee or minimum monthly commitment required?

33. What are your purchase prices at 500 kg, 2 tonnes, 5 tonnes and 10 tonnes per month?

34. Can you provide a written rate sheet, purchase order or price-confirmation message before I buy material from suppliers?

35. Who bears losses arising from fire damage, transport incidents, rejected loads or disputed chemistry?

F. AGGREGATOR AND COLLECTION PARTNERSHIP

36. Can I become an approved collection or reverse-logistics partner for your organization?

37. What registrations, consents, insurance, training and storage arrangements do you require from an aggregation partner?

38. Can your compliance team provide the permitted operating structure and documentation for a collection partner?

39. Do you currently work with aggregators, and what activities are they permitted to perform?

40. Would you provide a letter of authorization, collection agreement or material-offtake agreement after due diligence?

41. Can you provide pickup support, approved containers, safety procedures, chemistry-identification training or supplier documentation templates?

42. Do you pay a separate collection, logistics or service fee in addition to the battery purchase price?

43. What monthly volume would qualify me for preferred pricing or an exclusive territory?

44. Can I aggregate material from approximately 20 to 100 service centres under your collection network?

G. EXTENDED PRODUCER RESPONSIBILITY AND TRACEABILITY

45. Who receives the Extended Producer Responsibility certificate generated after recycling batteries that I supply?

46. Does your purchase price already include any economic value associated with the Extended Producer Responsibility certificate?

47. What supplier, source and batch information must I provide for your procurement and quarterly-return reporting?

48. Will you provide a recycling or material-receipt acknowledgement linked to each consignment?

49. Can the original producer or vehicle manufacturer retain the Extended Producer Responsibility benefit under a service-fee arrangement?

50. How do you maintain chain of custody from collection source through processing and recovered-material sale?

H. FUTURE TOLL PROCESSING AND BLACK-MASS OFFTAKE

51. If I later obtain the required permissions for dismantling, will you buy separated cells and modules?

52. Do you offer toll processing instead of outright purchase?

53. What is the toll-processing charge per kilogram, minimum lot size and expected processing loss?

54. Under toll processing, who owns the recovered output and the Extended Producer Responsibility benefit?

55. Would you purchase LFP, NMC, LCO or NCA black mass from a registered mechanical pre-processor?

56. What minimum lot size, lithium/nickel/cobalt content, moisture, particle-size and copper/aluminium/iron impurity limits do you require?

57. How is black mass sampled, assayed and settled commercially?

58. Which battery material are you currently struggling to source?

59. Which material do aggregators most frequently supply incorrectly?

60. If you were starting a battery aggregation company today, which battery stream would you focus on and why?

I. VISIT CLOSE-OUT

61. Who should I contact for daily rates and load approval before purchasing material?

62. What photos and information should I send for a pre-purchase quotation?

63. Can we agree on a small trial load, and what quantity and chemistry should it contain?

64. What are the next onboarding steps, responsible person and target date?

Documents promised / follow-up notes
